

Aim:

Design and develop a Job Application Form using HTML and CSS. The webpage should provide an organized form for collecting the applicant's personal, contact, and professional information.

Algorithm:

1. Start.
2. Create an HTML document and set the character encoding, viewport, and title as "Job Application Form".
3. Apply CSS styling to set the font, background color, form container, headings, tables, input fields, and buttons.
4. Create a main container to hold the job application form.
5. Add the heading "Job Application Form".
6. Create the Personal Information section using a table and add: a. Name b. Age c. Password d. Retype Password.
7. Create the Security Information section using a table and add: a. Security Question using a dropdown/select menu b. Security Answer using a text field.
8. Create the Contact Information section using a table and add: a. Email ID b. Home Phone Number c. Office Phone Number.
9. Create the Languages Known section and add checkboxes for: a. Malayalam b. English c. Hindi.
10. Create the Application Documents section and add a file upload control for uploading the CV.
11. Add Submit and Reset buttons at the bottom of the form.

12. Apply CSS styling to organize the form using tables and improve its appearance.

13. Save the HTML file and open it in a web browser.

14. Verify that all fields, dropdowns, checkboxes, file upload, Submit button, and Reset button are displayed correctly. 15. Stop.

Result:

The Job Application Form was successfully designed and developed using HTML and CSS. The form contains organized sections for personal information, security information, contact information, languages known, and application documents. It includes text fields, password fields, a dropdown menu, checkboxes, an email field, phone fields, file upload, Submit button, and Reset button. CSS styling and HTML tables were used to provide a clear and structured layout.
